Diary - a powerful tool for controlling of workers and monitoring the state of work

Each task has the following statuses: "For execution," "Not completed" and "Completed"

In the diary, the worker marks the stages of the task

A diary is attached to each task performer

INTEGRATION AND SCALABILITY

CRM FEATURES

Q: Why our product?

1. We create a ***customized CRM with only the necessary functions***. Up to corporate design requirements. This is the main difference from typical CRMs, to which adding additional modules is problematic and requires significant time.
2. The ***Armenian language*** is integrated into our products. Therefore, not only all interface elements, but also the contents of the database - the names of works, organizations, etc., are executed in Armenian with UTF-8 encoding.
